The nucleic acid is used plants for enhanced disease resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim

This sequence represents the maize PR-1 like protein, PR-1mz. The cDN encoding this sequence was isolated by screening a BTH-induced cDNA library of maize. The library was screened using a probe matching to the PR-1 barley clone HVPR1BR. The cDNA encoding this sequence,
                                                                                                                                                                    New DNA contg. plant systemic acquired resistance genes - and transgenic plants contg. them, impart disease and pest resistance, also Arabidopsis gene promoter to control DNA transcription

The DNA sequences were isolated by differential screening of a cDNA library, followed by analysis by Northern hybridisation to RNA in the presence and absence of cyclohexamide. The genes are used in the creation of transgenic plants All of these sequences confer anti-pathogenic properties to transgenic plants. Transgenic expression of 2 or more of the recombinant molecule of the invention that encode anti-pathogenic proteins provides a synergistic increase in plant protection, and may also offer protection against a wider range of pathogens.
